AV Design Services

Creating balance between architectural form, system function, and budgetary requirements to provide the best suited technology solutions

Understanding how technology can improve workflow and enable employees to perform at their best is critical in making design decisions. New Era Technology will work with your design team to identify these needs and the best technology choices for your environment. By coordinating with architects, New Era helps align technology devices with the aesthetics of your space. New Era can provide a comprehensive design package, including renderings for coordination with other trades, so all technology needs are met and integrated into the architectural design set, ensuring your end goal.

Working with New Era Technology

- Creating balance between functionality, architectural form, and budgetary requirements to provide the best technology solutions

- Using human-centered design to develop technology solutions designed to maximize end-user productivity and streamline workflow

- Design coordination with architects and other trusted partners to capture technology requirements early in design planning and to optimize budgets and minimize additional cost

- Visualization of technology through 3D renderings to make decisions and changes sooner minimizing cost later in the project

- Develop technology standards and best practices for consistent end user experience across office locations

- Collaborative design sessions to re-imagine your workplace with technology solutions that enable your employees to work smarter and more efficient
